

## **Chief Aircraft Inspector**

### **Job Description**

The Chief Inspector will be responsible for supervising inspectors, generating and updating RS manuals, QC manuals, forms manual and training manuals.

### **Essential Duties**

- Perform inspection functions of the repair station as outlined, in accordance with the Repair Station
- Ensure familiarity of all applicable Federal Aviation Regulations, manufacturer's procedures/recommendations, and other pertinent data as it relates to the item of work being performed
- Accepting incoming products procured for use by the Repair Station and will ensure that those products are approved or acceptable
- Perform preliminary inspections on all aircraft and/or components that undergo maintenance to determine the state of preservation, necessity for functional test or non-destructive testing, and to document any obvious defects
- Assure that all inspections are properly performed on all completed work
- Inspectors are responsible for the inspection entries on forms and in work orders used in the respective Departments
- Make progressive and on-going inspections at various stages of Teardown, Overhaul, and Repair of all Units or Components received by the Repair Station for service
- Responsible for checking completed Work Orders / Workbooks for work performed
- Perform scheduled and systematic evaluation audits for the Repair Station to ascertain its own abilities and procedural compliance to establish policy and guidance
- Provide training and technical assistance to others

### **Job Requirements**

- Helicopter experience
- Minimum of 10 years in commercial aviation
- Minimum of 5 years inspection experience
- A&P License
- IA preferred
- Experience in an FAA Part 145 and/or 21 environment
